Aviation Department Manager - Description

The Aviation Department Manager is designed to track details of every flight your aircraft operate. By entering the basics of each leg your aircraft fly, pertinent data is compiled and made available for various reports. The system has been designed by a pilot with the needs of the aviation manager in mind. The system has evolved over the last decade and is in use at several flight departments and charter operations.

Key Features:

- ✓ Every part of the system is **customized for your business needs**. Many off the shelf systems are available but none will handle the unique requirements of each individual business. We will work with you to ensure this system satisfies your business needs.
- ✓ Includes ability to store **Notes or Comments** on each Flight Leg in the system.
- ✓ **Multiple Sorting** of records in the system. Eg. Trip date, Trip number, Point of Departure, Captain
- ✓ View all records in a **spreadsheet style view**.
- ✓ Records can be located by using various **Search** criteria.
- ✓ The Aviation Department Manager can be integrated with the Maintenance Manager module (available separately) which will automatically update times and cycles on every component in the system.
- ✓ We have recently added a Passenger Module and now include Manifest, Usage Tracking and Customs Reports.

Reports

- ✓ The application includes several reports in the following categories: Basic Trip Reports, Utilization Reports, Fuel Use and Purchase Reports, Crew Flight / Duty Reports, Crew Status Reports
- ✓ Reports can be exported to: Microsoft Word or Excel, or emailed
- ✓ All reports are viewed on screen prior to printing or exporting
- ✓ Individual criteria for reports are selected by the user prior to printing based on specific reporting requirements. (Aircraft, Starting Date, Ending Date)
- ✓ **Additional reports can be custom designed for your specific requirements either at initial delivery or any time in the future for an additional fee.**

Technical Description

Pro Pilot Services will complete a custom PC based program designed to your specifications to handle the specialized functions in support of your flight operation. Although a basic system has already been developed and is in place at several other flight departments it should be modified to suit your specific needs. The "Aviation Department Manager" program is written using the Borland Database engine and is a standalone program requiring no additional purchase of support software.

- ✓ The program runs under the Microsoft Windows operating system and is cross platform compatible with Windows 95, 98, Windows 2000, WinNT and Windows XP. Program is **Year 2000 compliant**
- ✓ The Program is Network Aware and provides for record locking and access by multiple users.
- ✓ The user interface is very easy to use and all items are selected from a menu system.
- ✓ Extensive error checking is incorporated as required in all data files.
- ✓ The system can be installed in a few minutes by anyone with basic computer knowledge.

Computer Hardware Requirements

- ✓ Minimum Pentium 133 Microprocessor with 64 Megabytes of memory
- ✓ Minimum 100 Megabytes of available Hard disk space at all times
- ✓ CD Drive for installation of Software and periodic updates.

Security

- ✓ Password security is available within the application to prevent unauthorized access to the system.
- ✓ Each entry or change is stamped with the user's name, current time and date.
- ✓ Systems can be set up with Read Only Access to the data for security.
- ✓ **It is highly recommended that the data be backed up and stored offsite on a regular basis. Daily Backups are recommended for high volume Flight Departments.**

Cost & Timetable

- ✓ The system as described can be developed and installed within 60 days of your approval.
- ✓ Cost will be described in a software development proposal based on your flight department requirements.

Support

- ✓ Free telephone support of one copy of the product for six months from the date of final installation is included in the purchase price.

Trip Entry Screen

This is a sample of the trip entry input screen. The data input on this page forms the basis for all of the system reports. Data input is compiled and organized to print the specific reports required by your business. Specific requirements for your business can be added to this data entry screen either prior to development of your system or in the future. A full featured "HELP" system is incorporated for assistance on any item on this screen.

Fuel Purchases at homebase are calculated automatically at your contract rate (fuel and \$US rates are stored on a separate Control Page). \$US purchases are calculated automatically and are immediately converted to Litres and \$CDN at the rate stored on the Control Page.

Clicking the MANIFEST button (or selecting the Passengers Tab) takes you to the passenger list for this leg. (See next page)

Passenger Manifest

The passengers' ident's are listed on this page – one for each seat. To add a passenger to this flight the user would click on the drop down arrow for a listing of all the available passengers. If the passenger is not on the list select "Add New Passenger to File" and you move to the Passenger Input Screen and can immediately enter the new passenger (see next page) (Add: Passenger Mr. Barry. Rookman)

The screenshot shows the 'Aviation Department Manager' window. At the top, flight details are displayed: 97419 - 3 11/05/2004 LR35 - GXYZ CYDQ -> CYQZ. Below this, it states 'Passengers on leg from : CYDQ to CYQZ'. The main area contains 14 passenger entries, each with a dropdown menu. The first three are populated with 'HUANGL', 'HUNTINGTON', and 'LIVESEYS'. Below the passenger list are two buttons: 'Add New Passenger to File' and 'Return to Pg 1'. At the bottom, there are navigation buttons (back, forward, etc.) and a 'Close' button with a green checkmark. A tabbed interface at the very bottom shows 'Basic Data', 'Browse All Data', 'Trip Expenses', and 'Passengers'.

Passenger	Name
Passenger 1	HUANGL
Passenger 2	HUNTINGTON
Passenger 3	LIVESEYS
Passenger 4	
Passenger 5	
Passenger 6	
Passenger 7	
Passenger 8	
Passenger 9	
Passenger 10	
Passenger 11	
Passenger 12	
Passenger 13	
Passenger 14	

Passenger Input Screen

Passenger information can be added on this page. Select ADD to create a new passenger. An ident is created by combining the first and last names. Passengers full names and information can be added at this time or later as time permits – the ident is the only requirement at this stage. This module permits the user to store passport information and personal information as well. Much of this important information is required by Customs and needs to be entered only once to be available for reports.

Select **OK** to save the ident and additional passenger info. Add any additional passengers if required and select **Close** to return to the Trip Input Module-Passenger Page. The new passenger ident is now available to select from the drop-down list. (See below)
